Week 5: Suncatcher

What is a suncatcher? A suncatcher is an ornament that is made for catching sunlight! What is great about them is that you can make them out of things you find outside! This is a great way to show your love of nature and standing up for the environment!

Suncatcher example.

Follow the steps below to learn how to make your own suncatcher!

Step 1: Go into your backyard or on a walk with one of your parents and pick up some sticks, fallen leaves, and fallen flower petals.

Step 2: Bring your leaves, sticks and petals inside and get a paper plate and some tape (or glue if you have some).

Step 3: Put tape (or glue) on the back of your flower petals, leaves and sticks.

Step 4: Tape/glue your leaves, sticks, and petals to your plate.

Step 5: Tape your suncatcher to a window in your house and let the rays shine in!
